

WEB HOSTING INFO

ABOUT US

We are proud to work with so many local business to help them get their websites online and make sure they perform to their highest level once they are online. We work together with Flywheel to offer a premium managed WordPress offering that will allow your website to not only perform great for your customers but also for yourself when you need to make any edits or changes.

WHY MANAGED HOSTING?

Working with a managed WordPress host is a great way to create peace of mind when you're deciding where to keep your WordPress website. The benefits are a much more secure and speedier site since our hosting infrastructure was designed specifically to host WordPress. This means we can't host emails, but the benefits are worth it.

Our provider has been able to custom program the servers to act more securely than your standard shared or bulk host. This allows us to offer a premium hosting experience to our clients that includes things like daily backups with a 1-click restore and included Content Distribution Network services that allow your website to be hosted in multiple data centers across the web to not only ensure that your website has a higher uptime, but can also make your website faster by delivering the website files from the nearest server to your users.

WHY WORK WITH US?

Over the years we have learned a lot about hosting WordPress for a lot of clients and we've developed a system that goes beyond just our host to ensure that your website is always performing its best and to maximize the uptime of your site. In addition to our choice of host we also have a great WordPress toolkit when it comes to optimization techniques and plugins that allow us to tweak and optimize the performance of each site to ensure that it runs as well as it can. This includes image optimization plugins that will automatically scale any image you upload to your site and compress it losslessly to take up a smaller file size. We also have a series of caching and code consolidation plugins that allow us to drastically improve performance of slower/heavier sites by making sure we pre-compile certain parts of the code and deliver only what is needed to the customer so they can get the best experience possible.
